

Problem Statement: 8051 project that converts ASCII alphabet to Morse code on port 0 of the 8051.

Algorithm: The look table will be used to compare and find the equivalent Morse code value. First, the equivalent value from ASCII is found by subtracting 41H from the value given and checking the value.

A dot (.) is represented as 01

A dash (-) is represented as 11

The EXCHANGINGDPTR subroutine manages the exchange of DPTR values with temporary registers. This allows the program to switch between accessing the LUT and the input string without losing track of their respective addresses.

A	■ ■ ■	N	■ ■ ■
B	■ ■ ■ ■ ■	O	■ ■ ■ ■ ■
C	■ ■ ■ ■ ■	P	■ ■ ■ ■ ■
D	■ ■ ■ ■ ■	Q	■ ■ ■ ■ ■
E	■	R	■ ■ ■ ■ ■
F	■ ■ ■ ■ ■	S	■ ■ ■ ■ ■
G	■ ■ ■ ■ ■	T	■ ■ ■ ■ ■
H	■ ■ ■ ■ ■	U	■ ■ ■ ■ ■
I	■ ■	V	■ ■ ■ ■ ■
J	■ ■ ■ ■ ■	W	■ ■ ■ ■ ■
K	■ ■ ■ ■ ■	X	■ ■ ■ ■ ■
L	■ ■ ■ ■ ■	Y	■ ■ ■ ■ ■
M	■ ■ ■ ■ ■	Z	■ ■ ■ ■ ■

The letter 'A' is represented in Morse code as. -, which translates to the binary sequence 0111. This binary sequence is stored in the LUT at the index corresponding to 'A'.

Code:

ORG 0H

START:

MOV DPTR, #LUT ; Set DPTR to the lookup table (LUT) address

ACALL EXCHANGINGDPTR ; Exchange DPTR with temporary registers

MOV DPTR, #DATATOCONVERT ; Set DPTR to the address of the data to convert (ASCII characters)

NEXT_CHAR:

```

        MOV A, #00H          ; Clear register A
        MOVC A, @A+DPTR      ; Load the current character from DPTR (ASCII value)
        JZ END_PROGRAM      ; If the character is 0 end the program
        ACALL ASCII_TO_MORSE ; Call the subroutine to convert ASCII to Morse
        MOV P0, A            ; Output the result to Port 0 (P0)
        INC DPTR             ; Increment DPTR to point to the next character
        SJMP NEXT_CHAR       ; Repeat for the next character

```

END_PROGRAM:

```

        SJMP $              ; Infinite loop to end the program

```

ASCII_TO_MORSE:

```

        MOV A, #00H          ; Clear register A
        MOVC A, @A+DPTR      ; Load the ASCII value from DPTR
        clr c
        SUBB A, #41H         ; Subtract 41H (ASCII value of 'A') to get index for Morse LUT
        CJNE A, #25, OUT     ; If the result is not within range (A-Z), jump to OUT
        MOV A, #00H         ; If the character is not A-Z, clear A

```

OUT:

```

        ACALL EXCHANGINGDPTR ; Swap DPTR with temporary registers
        MOVC A, @A+DPTR      ; Load the Morse code from the LUT using the adjusted index
        ACALL EXCHANGINGDPTR ; Swap DPTR back to the original value
        RET                  ; Return from the subroutine

```
